

**CONVENTION ON THE PROHIBITION OF THE USE, STOCKPILING, PRODUCTION AND TRANSFER OF
ANTI-PERSONNEL MINES AND ON THEIR DESTRUCTION**

State [Party]: REPUBLIC OF YEMEN

reporting for time period from 1 January 2018

to 31 December 2018

DIRECTOR OF YEMAC:

**YEMEN EXECUTIVE MINE ACTION CENTER (YEMAC)
Ameen Saleh Alaqili
Director of the Yemen Executive Mine Action
Center**

POINT OF CONTACT:

Mr. Akram Salem Ali
Office Manager of the Director of YEMAC
Tel.: 00 967 733462746
00 967 717861450
Email: akram.alaqili@yemac.org

A National implementation measures

__No legal, and other measures were taken as an additional measure to the law issued by the Parliament of Yemen and signed by the president in 1998.

__UNDP has been supporting mine action in Yemen since 2003. Since 2015 this support has revolved around the Emergency Mine Action Programme. The programme has refocused activities from a development model into emergency response. UNDP through its mine action funding is supporting YEMAC in the provision of incentives to deminers, providing equipment and consumable supplies and giving technical advice. -The Yemeni government is also carrying out the collection and destruction of Explosion Remnants of War (ERW).

__The implementation of the emergency response is based around quarterly tasking orders of YEMAC teams to areas to be cleared. The deployments are based on needs as assessed through the casualty figures that are captured by YEMAC. YEMAC HQ in Aden provides the quarterly tasking orders and maintains records on the work completed. UNDP is able to form a bridge with the humanitarian community coordinated by the UN Cluster System and is able to request specific tasks if requested from humanitarian organizations.

__Because the situation since the 2014 when rebels started the coup against the legitimate government the implementation of mine action emergency response started in 2016 focusing on the highest impacted areas to help refugees and displaced persons to return back safely to their homes.

__Prior to the conflict, mine action was addressed at the strategic level by the National Mine Action Committee (NMAC), as the governmental body with the support of the UNDP- Yemen. NMAC was responsible for policy making, resource allocation, approval of the National Mine Action Strategy and management of government funds. It implemented its work through the Yemen Executive Mine Action Centre (YEMAC). Unfortunately, due to current circumstances, there is no National Mine Action strategy and NMAC has been disbanded, the Director of YEMAC at the national level has taken on the role of NMAC as a per of the National Mine Action Standard (National Mine Action Standards Guide in the application of national standards - complex emergency situation page (10)). The Director of YEMAC guides all strategic level mine action decisions while reporting to the government to ensure his directives are in line with a national level policy.

D Areas known or suspected to contain anti-personnel mines and ERW:

Despite this, YEMAC continues to clear minefields, often under difficult circumstances. However, the critical systems that support demining efforts have been disrupted to such an extent they are no longer viable. This includes survey, information management and casualty surveillance. Added to this, as we have highlighted previously, new mines are being laid. This may include new mines being laid on previously cleared areas, so in many respects Yemen has gone backwards in its efforts to meet its obligations under the convention.

With the current situation being confronted, Yemen is asking for three (3) years until 1 March 2023 to conduct a survey to determine as accurately as possible the extent and impact of the new AP mine contamination. Concurrent to this, the extension period will allow for the development of the mine action response to be able to work in a complex environment utilizing the support of international organizations to meet old and new technical challenges, including those related to anti-personnel mines of an improvised nature and other IEDs.

The conflict has produced a large amount of new contamination; the exact locations and extent are not known due to the inability to access these areas to conduct surveys while the old survey data are considered outdated. This is compounded by areas previously cleared being re-contaminated. For example, Aden announced in 2003 it is free of landmines and a ceremony was held for this occasion, Aden was subsequently reached by the rebels and then fought over in 2015, contaminating the city boundaries with AP mines and UXO which to date are still not fully removed. Consequently, there is no clear picture of the level of contamination within Yemen.

SHAs left since 2014

Note: the challenges will be resulted from the new NTS which will be made during the three years of the new extension.

G Victim assistance

Previously In terms of Victim Assistance, the Yemen Ministry of Health and Ministry of Insurance and Social Affairs, in conjunction with Yemen prosthetics center and international NGO conduct support programs for mine victims. Community Based Rehabilitation projects are training more field workers to cover all priority areas including prosthetics. The victim assistance program is implemented by three phases:

Phase 1: to surveyed and register the victims by special forms contains all information about each victim. and to address their needs.

Phase 2 : Is Surgery examinations to address their needs.

Phase 3: Is to provide the victims with all medical needs such as health care, artificial limbs and physical rehabilitation.

currently YEMAC VA teams are doing the first phase (to surveyed and register the victims by special forms contains all information about each victim. and to address their needs).

Victims of Landmines and ERW have been recorded since 2014 and during the Emergency response as the table below indicates. This has however almost certainly underreported.

Victims of ERW, LANDMINES			
YEAR	Males	Females	Total
2016	520	29	551
2017	682	39	721
2018	967	120	1087
Total	2169	188	2359

Locations where victims of landmine and ERW are recorded currently on the following provinces (Aden, Abyan, Taiz, Shabwah, Lahij , Hadramout, Al Jawf, Al Bayda, Al Hudaydah and Marib).

At this moment there is no nation-wide victim surveillance system. Victims of AP mines are recorded in an ad hoc manner by the local authorities, medical institution and by YEMAC. We can assume from anecdotal evidence there is a high level of casualties, which is to some degree is support by statements from health NGOs such as Medecins Sans Frontieres (MSF).

The lack of comprehensive victims' surveillance is due to

- The size of the contaminated areas where conflict is ongoing.
- The lack of resources
- The presence of a large number of casualties in areas of ongoing fighting who are difficult to reach.
- The number of victims who die or are treated with no record.

H Measures to provide warning to the population :

_YEMAC MRE teams conduct periodic 'campaigns' where they conduct training of trainer activities in communities prioritized by those communities deemed to be most affected by the conflict or if a local authority specifically requests MRE activities.

_Community liaison activities are conducted by YEMAC MRE teams. These activities take place before, during and after mine field clearance.

_ICRC Conducts MRE in conjunction with the Yemeni Red Crescent Society (YRCS). ICRC implemented a training of trainer of YRCS staff to enable them to deliver MRE as a component of their activities. The ICRC employs a number of local specialists in mine action and the specialist conduct follow up QA activities.

_DDG conducts MRE in communities and in schools through direct and participatory presentation with the attendees.

_UNICEF supports MRE through the Child Protection function, this support comes in the form of funding and the provisions of resources. In 2018 there was an attempt to harmonize Risk Awareness products.

The Current Mechanisms of delivering of MRE is:

- Preparing volunteers from the affected community and training them on awareness methods.
- Field access to the population centers and providing them with means and materials to assist them with posters, leaflets, ... etc.
- Giving lectures and lectures on the gatherings, both in schools, neighborhoods and villages.

– YEMAC MRE trainers accompany some MRE teams, for example, those of DDG to provide quality assurance of MRE activities. MRE targets everyone, including girls, women, boys and men. The most common methods of information transmission are posters, signs, brochures and school presentations. During the period from April 2015 to 2018 and with the support of UNICEF, Yemen has implemented MRE activities.

The targeted people by MRE during the period from 2015 to 2018:

Year	Adults			Kids			Locations	Total
	Males	Females	Total	Males	Females	Total		
2015	75377	45339	120716	121532	107699	229231	2037	349947
2016	29691	20723	50414	117892	112868	230760	3240	281174
2017	28406	13292	41698	93839	73941	167780	5089	209478
2018	66924	55832	122756	188629	135186	323815	160754	446571
Total	200398	135186	335584	521892	429694	951586	171120	1287170

I Cooperation and assistance:

- The cooperation between Yemen Mane Action program and UNDP is strengthened to be in direct management of UNDP and UNDP is working with YEMAC to build the capacity of YEMAC in the field of management and in the technical issues.
- Yemen Mane Action program by support of UNDP is going to share the NGOs in some mine action activities as the new challenges which Yemen faces required the cooperation between YEMAC / UNDP and other NGOs.
- YEMAC expanding to allow partnerships with INGO's and commercial companies.

J APMs destroyed after entry into force

_ Number of AP, AT, Booby traps and ERW have located and destroyed (see table below).

Year	AP	AT	UXO	IED	Total
2014	8	5	384	0	397
2015	2	0	0	0	2
2016	11457	14397	349936	1	375791
2017	1576	2957	202693	545	207771
2018	988	22867	26101	1645	51601
Total	14031	40226	579114	2191	635562

K Application of Land Release Standards:

The National Mine Action Committee (NMAC):

_ Prior to the conflict, mine action was addressed at the strategic level by the National Mine Action Committee (NMAC), as the governmental body with the support of the UNDP- Yemen. NMAC was responsible for policy making, resource allocation, approval of the National Mine Action Strategy and management of government funds. It implemented its work through the Yemen Executive Mine Action Centre (YEMAC). Unfortunately, due to current circumstances, there is no National Mine Action strategy and NMAC has been disbanded, the Director of YEMAC at the national level has taken on the role of NMAC as a per of the National Mine Action Standard (National Mine Action Standards Guide in the application of national standards - complex emergency situation page (10)). The Director of YEMAC guides all strategic level mine action decisions while reporting to the government to ensure his directives are in line with a national level policy.

– YEMAC is still responsible for the implementation of mine action activities in Yemen with the cooperation of UNDP. The Yemen Mine Action Programme has been in operation for 14 years and there are currently approximately 900 deminers working in the field. Yemen also has two main national NGOs involved in mine action, focusing on Mine Risk Education and victim assistance programs. These are the Yemen Mine Awareness Association and Yemen Association for Landmines Survivors (YALS) these aim to support and reintegrate landmine survivors in Yemen.

– International NGOs and organizations are also implementing work in Yemen, but currently to a very limited degree. The Danish Demining Group (DDG) currently has MRE teams, DDG also has EOD training courses. The ICRC is implementing MRE through four teams of the Yemeni Red Crescent Society, these teams conduct MRE in conjunction with other YRCS activities such as medical distributions.

– UNDP has been supporting mine action in Yemen since 2003. Since 2015 this support has revolved around the Emergency Mine Action Programme. The programme has refocused activities from a development model into emergency response. UNDP through its mine action funding is supporting YEMAC in the provision of incentives to deminers, providing equipment and consumable supplies and giving technical advice.

– The kingdom of Saudi Arabia through the King Salman Humanitarian Aid and Relief Center have implemented a large mine action programme under the banner of the Masam Project to clearance mines in Yemen. The Yemeni Government signed one-year Agreement for Clearance of landmines and Explosive Remnants of War as a part of the emergency response with Dynashield in solidarity with Dynasafe (M E Project Management) and with the participation of Dynasafe Area Clearance Group (now Safelane Global), a UK company. This programme has been implemented in partnerships with YEMAC through the direct support to 32 demining teams. The project will focus on the areas of Marib, Shabwah, Al Baidha, Al jawf, Lahij, Taiz, Sana'a and Al Hudaydah.

– As the conflict is ongoing in Yemen, the Engineering Wing of the Yemeni Army, although not directly engaged in humanitarian demining work, are a feature of the programme as they clear areas of AP mines as part of their duties, historically the Director of the Engineering Wing was also a member was a key member of NMAC.

– The units of the Engineering Wing implemented breaching activities as part of the military campaign. This information is shared with YEMAC, so that once YEMAC has access to the areas where the fighting took place, after each liberation they have evidence for further survey and data on where and what the military deminers have done.

_The Department of Military Engineering facilitates the work of the teams in the field through cooperation with military and security units and also cooperates and assists in obtaining licenses for the destruction of mines and war remnants by the competent authorities. The Military Engineering Wing also provides some accommodation to YEMAC.

L Reporting on decisions on Yemen's Plan within its extension request:

_With the current situation being confronted, Yemen is asking for three (3) years until 1 March 2023 to conduct a survey to determine as accurately as possible the extent and impact of the new AP mine contamination. Concurrent to this, the extension period will allow for the development of the mine action response to be able to work in a complex environment utilizing the support of international organizations to meet old and new technical challenges, including those related to anti-personnel mines of an improvised nature and other IEDs.

_This extension period will also see the implementation of a coordination level, that was not needed previously, but is vital in the current circumstances. We know that three years will not be sufficient for Yemen to meet its mine clearance commitments under Article 5. However, we are hopeful that, at the end of the proposed extension period the security situation will improve permitting Yemen to carry out survey activist to gather the necessary information to submit a third request extension request based on fact.

_The level of contamination and the subsequent impact by AP mines in Yemen is not known. To submit a plan at this time offering detailed milestones of progress and the amount of time needed to fulfill Yemen's commitments under Article 5 would be unrealistic. The aim of this interim extension request is to carry out activities that would allow the mine action sector to recover and to carry out a resurvey of areas, where the security situation allows, and establish a new baseline that will allow Yemen to develop a realistic plan to address the drastic change in the situation which is grounded in reality.

_During the period of the extension request time, Yemen mine action actors will continue implementing its emergency response in supporting the humanitarian efforts to save lives. This will focus on the prioritized clearance of mined areas field clearance based on a prioritization system that includes the humanitarian sector and local community leaders.

Annex (I) Types of Landmines in Yemen.

LANDMINES	
Anti-personnel	Anti-Vehicle
OZM 4	M15
